[Web Vulnerability Audit Report]

Generated: 2026-10-26 15:57:22 UTC

-- SCAN SUMMARY --

TARGET URL : https://apps.asirvad.com/tms/login.aspx

PUBLIC IP : 192.29.50.64

SCAN DATE : 2026-10-26 15:57:22

FINDINGS : 13

RISK LVL : CRITICAL

-- FINDINGS (13 total) --

#	VULNERABILITY TYPE	SEVERITY	DESCRIPTION
1	Missing Security Header: content-s	HIGH	Content-Security-Policy (CSP) header is missing. This leaves the app vulnerable to XSS and data injection attacks.
2	Missing Security Header: x-frame-o	MEDIUM	X-Frame-Options is missing. The page may be framed by external sites, exposing users to clickjacking attacks.
3	Missing Security Header: x-content	LOW	X-Content-Type-Options: nosniff is not set. Browsers may MIME-sniff response bodies incorrectly.
4	Missing Security Header: strict-tr	HIGH	HSTS (HTTP Strict Transport Security) header is missing. HTTPS is not strictly enforced, enabling downgrade and SSL-stripping attacks.
5	Missing Security Header: referrer	LOW	Referrer-Policy header is missing. Sensitive URL paths/parameters may leak to third parties in HTTP Referer headers.
6	Missing Security Header: permissi	LOW	Permissions-Policy header is missing. Sensitive browser features (camera, microphone, geolocation) are not restricted.
7	Information Disclosure: x-powered	MEDIUM	X-Powered-By header discloses underlying backend technology and versions.
8	Information Disclosure: server	LOW	Server header reveals web server software and banner information.
9	Outdated Component: jQuery v1.10.2	HIGH	Retire.js detected vulnerable/outdated client-side library 'jQuery' (version 1.10.2). 3rd-party CORS XSS via $.parseHTML() and Prototype Pollution via jQuery.extend(true, {}, ...). jQuery 1.x and 2.x are End-of-Life and no longer receiving security updates. Remediation: Upgrade to jQuery 3.7.1 or newer.
10	Outdated Component: Bootstrap v3.1	MEDIUM	Retire.js detected vulnerable/outdated client-side library 'Bootstrap' (version 3.1.1). Multiple XSS vulnerabilities in data-target, tooltip (data-viewport, data-container), affix (target property), and collapse (data-parent) plugins. CVE-2024-6485 allows XSS via data-* attributes even in newer 3.x builds. Bootstrap 3.x is End-of-Life and no longer receiving maintenance or security patches. Remediation: Upgrade to Bootstrap 4.6.2+ or 5.3.3+.
11	Outdated Component: Lodash v2.0.0	CRITICAL	Retire.js detected vulnerable/outdated client-side library 'Lodash' (version 2.0.0). Critical Prototype Pollution in _.merge(), _.defaultsDeep(), and _.zipObjectDeep() methods. Attackers can overwrite Object.prototype properties, leading to DoS or RCE. Remediation: Upgrade to Lodash 4.17.21 or newer.
12	Outdated Component: jquery-validat	HIGH	Retire.js detected vulnerable/outdated client-side library 'jquery-validation' (version 1.11.1). Regular Expression Denial of Service (ReDoS) in URL and URL2 validation methods. Attacker-supplied input can cause catastrophic backtracking, stalling the browser. Cross-Site Scripting (XSS) vulnerability via showLabel — error messages are injected into the DOM without sanitization. Remediation: Upgrade to jquery-validation 1.20.0 or newer.
13	Potential DOM XSS Sink	MEDIUM	Dangerous JavaScript sink detected: `eval() execution`. If untrusted or user-controlled input reaches this sink, it can result in DOM-based Cross-Site Scripting.
